Arizona, Hawaii, Missouri Hospitals to Receive Health Care Reports, Analysis, and Insight from DataGen

95% of U.S. Hospitals Receive Industry's Best Health Care Data Services From DataGen

Additions of AzHHA, HHIC, and MHA, Bring DataGen Client Total to 41 State Hospital and Health Care Associations

ALBANY, N.Y. — DataGen, a HANYS Solutions company, announced that three state health care associations signed on to receive its data analysis and reports on hospital financial and policy activities. The Arizona Hospital and Healthcare Association (AzHHA), Hawaii Healthcare Information Corporation (HHIC), and Missouri Hospital Association (MHA) will each purchase DataGen's full range of *KeySTATS*® health care data analytics products. With the three agreements, DataGen now provides its unique products and services to 41 state hospital and health care associations representing 95% of all hospitals across the nation.

As health care reimbursement systems evolve and reform policies are implemented, DataGen's insightful financial reports help hospital leaders chart a course for the future. Financial analysis and predictive models are central to their ability to develop strategic plans, measure fiscal strength, and prioritize initiatives at their organizations.

DataGen gives hospitals and health systems real-time information on legislative actions that affect their operations, particularly concerning the Medicare system. With access to DataGen's experts and information, members of AzHHA, HAH, and MHA will now be able to interpret and assess federal health policy issues and their impact on hospital finances more accurately than ever before.

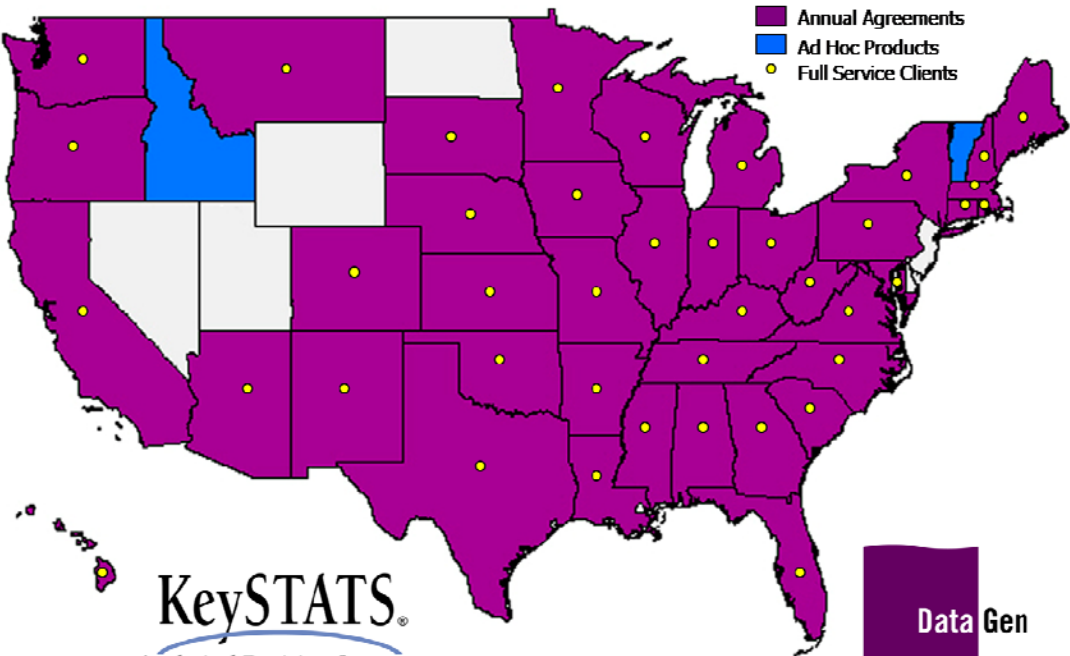

“Health care reform is driving an era of unprecedented change that affects the very fabric of the system. Today’s hospital decision makers face many challenges but have few answers, and need expert resources and reliable information to operate successfully and improve their performance,” DataGen President Michael Inicki said. “We are thrilled to be working with these respected organizations in Arizona, Hawaii, and Missouri, and look forward to providing their members with our high-quality services and answers to many of the questions that have emerged from health care reform.”

AzHHA represents more than 100 hospitals, health care systems, and affiliated health organizations across the state of Arizona. HHIC, a for-profit subsidiary of the Healthcare Association of Hawaii, provides information and services to more than 29 inpatient health care facilities. MHA’s membership of more than 150 facilities includes every acute care hospital in the state of Missouri, the majority of public hospitals, and rehabilitation, and psychiatric care facilities.

Created by health finance experts in 2001, DataGen’s information-based tools support the operations, advocacy, and educational needs of hospitals, health care systems, health care networks, hospital/health care associations, researchers, and consultants.
