
HANYS' Complex Case Discharge Delay Data Collection Pilot

Sarah DuVall, MPH, CPHQ, Director, Behavioral Health

Agenda

Complex case discharge delay pilot

Background

Methods and results

Next steps

Unintended consequences

25

YEARS
OLD

7+

MONTHS
INPATIENT

- Arrived due to mental health crisis. Co-occurring substance use disorder.
- Cycled between inpatient psychiatric and SUD rehabilitation units.
- Family not comfortable caring for the patient due to a history of multiple overdoses.
- Community residential facilities did not have capacity for wheelchair access.

16

YEARS
OLD

6+

MONTHS
INPATIENT

- Arrived when caregivers could not find in-home services or residential placement.
- The patient decompensated dramatically throughout the stay and required three to five beds to minimize disruption to others and two public safety officers at all times.

Unintended consequences

6 YEARS OLD

3+ MONTHS EMERGENCY DEPARTMENT

- Arrived when family determined they were unable to care for the child.
- Patient was ineligible for available residential treatment services due to age restrictions.

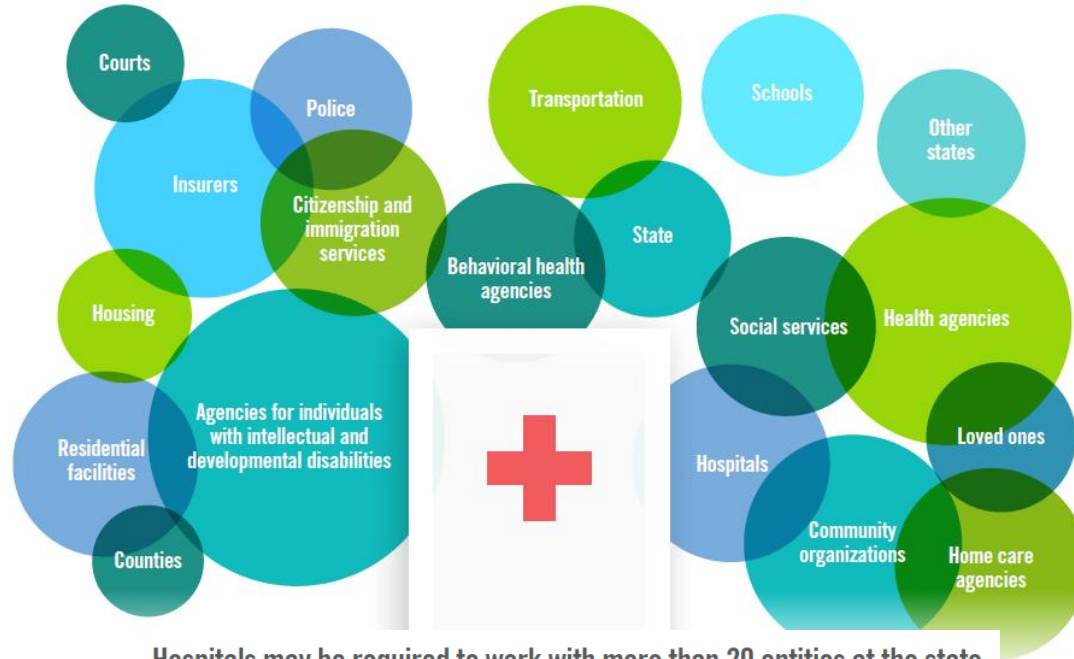

86 YEARS OLD

6+ MONTHS INPATIENT

- Arrived shortly after a residential facility discovered the patient was a level three sex offender, as it was previously not disclosed.
- No emergency shelter would accept the patient based on criminal history.
- Unreimbursed costs to the hospital were more than \$194,000.

Unintended consequences

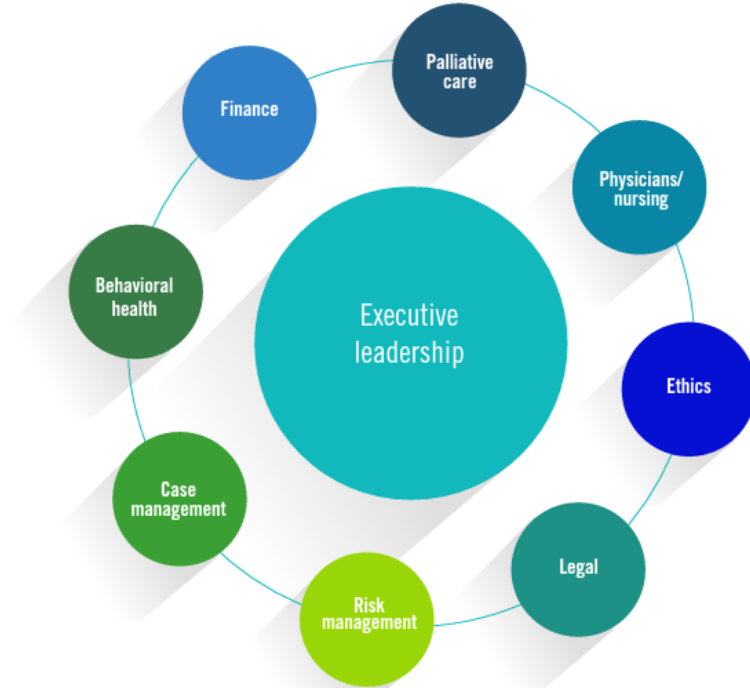

Hospitals may be required to work with more than 20 entities at the state, regional and local level to discharge a single complex case.

Methods and results

Approach

Inclusion criteria

- Any patient > 4 avoidable days in the emergency department and/or > 14 inpatient days (except swing beds)
- Discharged April 1 to June 30 or not discharged by June 30

Definition of avoidable days

- Number of days when a patient is stabilized and ready for discharge but is unable to be discharged

Data collected

- Hospital stay details, patient characteristics and external factors

Participation

- 52 hospitals participated
 - 50 for inpatient units
 - 13 for EDs
- 8 out of 52 submitted partial data

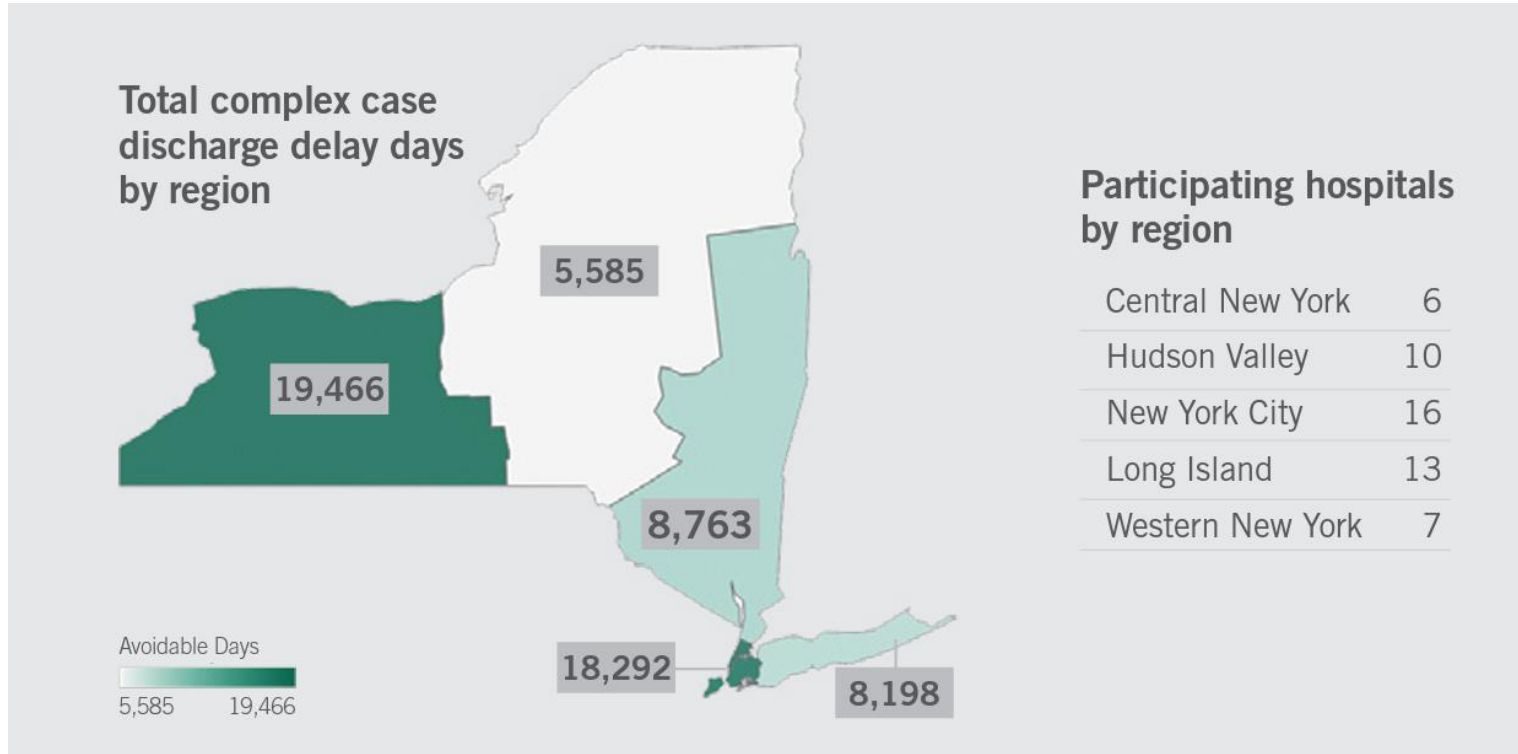

Results

- 90 days
- 52 hospitals
- 1,115 patients
- 60K delay days
- \$169 million

Results

Inpatient: Delay days

Inpatient delay days by number of patients

Inpatient: Age

Total inpatient delay days by age

April 1 to June 30, 2022

Average inpatient delay days by age

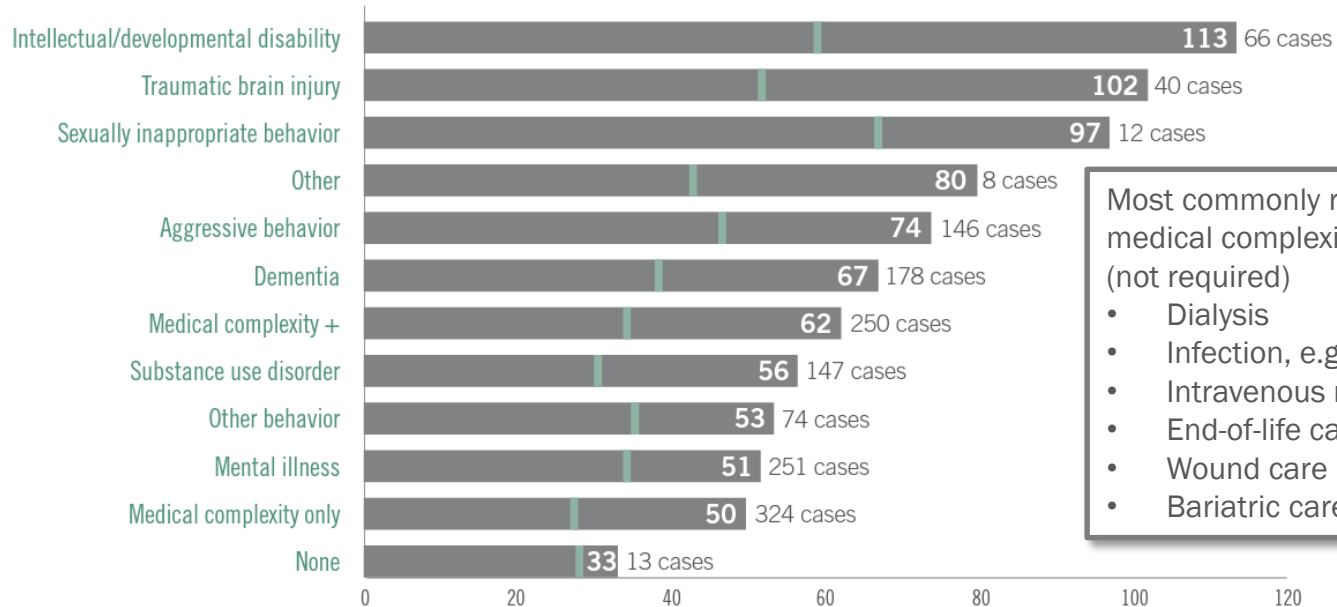

April 1 to June 30, 2022; green bar indicates median

Inpatient: Complex care needs

Average inpatient delay days by complex care needs

Most commonly reported medical complexities (not required)

- Dialysis
- Infection, e.g., COVID-19
- Intravenous medications
- End-of-life care
- Wound care
- Bariatric care

"Select all that apply" question; April 1 to June 30, 2022; green bar indicates median

Inpatient: External factors

Average inpatient delay days by external factor

Inpatient: Insurance

Average inpatient delay days by insurance type

April 1 to June 30, 2022; green bar indicates median

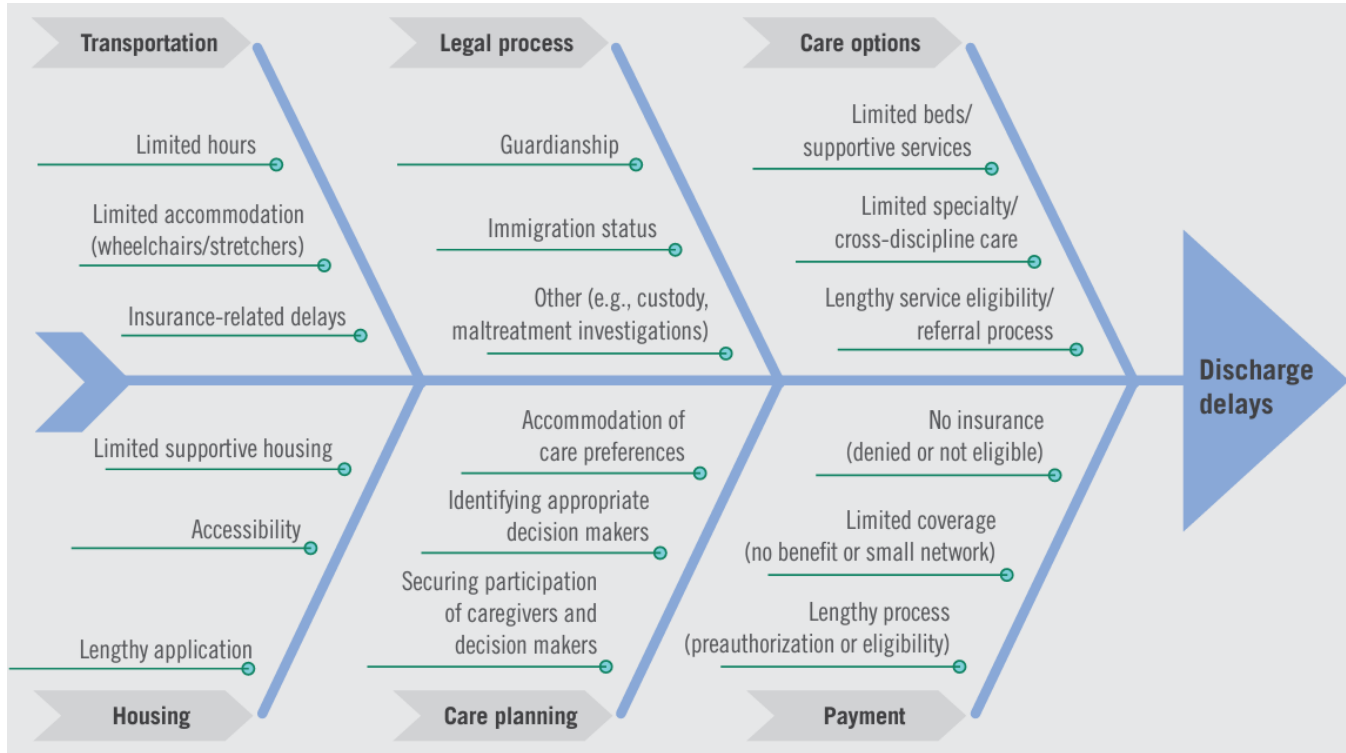

Estimated cost

- Inpatient
 - \$167 million total (992 cases/58,710 delay days)
 - \$168,000 average per case (59 average delay days)
 - \$2,000 average per day

- Emergency department
 - \$ 2 million total (123 cases/1,594 delay days)
 - \$18,000 average per case (13 average delay days)
 - \$1,4000 average per day

Summary of external factors

Complex case patients do not fit neatly into any care model within the healthcare system because the system is not designed for them.
